

Team 02 Microsoft AI-Powered Cybersecurity App (RMIT Capstone)

Prepared by: Ansh Parekh | Date: August 11, 2026 |

Task 2 Login Restyling & Team Page Requirements

1. Team Page Requirements

1.1 Purpose

The Team page will provide users with information about Team 02 – Microsoft AI-Powered Cybersecurity App, including each team member's name, photo, role and a short description.

The page should follow the existing application's visual style and provide a consistent experience across supported devices.

1.2 Team Member Fields

Each team member should contain the following fields:

Field	Required	Description
Name	Yes	Full name of the team member
Photo	No	Profile photo representing the team member
Role	Yes	Team member's agreed project role
Blurb	Yes	Short description about the team member and/or their contribution

2. Validation & Display Rules

TR-01 Name

- The name must not be empty.
- The name must be between 2 and 50 characters.
- Leading/trailing whitespace should be removed.
- Special characters should not cause the page to break.
- The name must be displayed consistently across the Team page.

Example: "Ansh Parekh" → Valid. " Ansh Parekh " → Displayed as "Ansh Parekh".

TR-02 Photo

- A team member photo is optional.
- If a photo is provided, it should display correctly within the team member card.
- If no photo is available, the system should display the team member's initials (first and last name, e.g., "Ansh Parekh" → "AP") in place of a photo, instead of leaving a broken image.
- The image (or initials avatar) should maintain a consistent aspect ratio and should not distort the page layout.

Edge case: Photo missing → Display initials (e.g., "AP") in place of a photo.

TR-03 Role

- The role must not be empty.
- The role displayed on the Team page must match the role agreed upon by the team.
- Roles should be displayed consistently for all team members.

TR-04 Blurb

- The blurb should not be empty.
- The blurb must be no more than 250 characters (input limit).
- If the blurb exceeds 150 characters, the displayed text should wrap/truncate (e.g., with an ellipsis) so the team member card layout stays consistent.
- Long text should wrap appropriately within the team member card.
- The blurb should support normal punctuation and special characters.

TR-05 Special Characters and Emoji

Special characters and emojis may be used in names and blurbs. The application must ensure that user-provided content is sanitised/escaped so that HTML, JavaScript or other markup cannot be executed.

For example: `<script>alert("test")</script>` must be displayed as text or rejected rather than executed.

Emojis should be display correctly where supported.

3. Login Page Scope

The existing login functionality and authentication logic have already been implemented in the boilerplate. Task 2 must not modify the existing authentication behaviour.

LOGIN-01 The login page may be visually redesigned/restyled to align with the application's overall branding.

LOGIN-02 The following existing functionality must remain unchanged:

- Authentication logic
- Login credentials processing
- Session behaviour
- Authentication state
- Successful login behaviour
- Logout behaviour
- Existing navigation after successful login

LOGIN-03 Any UI changes must not affect the existing authentication implementation.

LOGIN-04 The login page should maintain a consistent visual identity with the Team/Dashboard pages.

4. Login Page - Design Direction

Since this is the Microsoft AI-Powered Cybersecurity App, it's more useful to give the UX team a clear direction rather than prescribing every pixel.

Suggested Visual Direction

Theme: Modern enterprise cybersecurity + AI

Primary direction:

- Clean and professional
- Microsoft-inspired technology aesthetic

- Blue/indigo accent colours
- Dark navy or subtle gradient elements
- Minimal cybersecurity/AI visual elements
- Clear and accessible login form

Team Branding

The login page could display:

"Microsoft Team 02 AI-Powered Cybersecurity"

This gives the application an identity without making the login page overly complicated.

5. Edge Cases

ID	Edge Case	Expected Behaviour
EC-01	Team member photo is missing	Display the member's initials (e.g., "AP" for Ansh Parekh) in place of a photo
EC-02	Team member has a very long name	Text should wrap or truncate without breaking the card
EC-03	Blurb is very long	Text should wrap/truncate after 150 characters to keep the card layout consistent
EC-04	Blurb contains special characters	Characters should display correctly
EC-05	Blurb contains emoji	Emoji should display correctly where supported
EC-06	Input contains HTML/script	Content must be escaped/sanitised and must not execute
EC-07	Team member information is incomplete	Missing optional information should use an appropriate fallback
EC-08	Login page is resized to mobile	Login form should remain usable and readable
EC-09	Login styling changes are deployed	Existing authentication behaviour must remain unchanged
EC-10	User enters invalid login credentials	Existing authentication error handling should continue to work as implemented

6. Acceptance Criteria

Team Page

The Team page is considered complete when:

- Team member name is displayed.
- Team member photo is displayed, or initials are shown if no photo is provided.
- Agreed role is displayed.
- Team member blurb is displayed.
- Long names/blurbs do not break the layout.
- Special characters are handled correctly.
- Emojis do not break the page.
- HTML/JavaScript input cannot be executed.

- Team member cards have a consistent layout.
- The page works on desktop and mobile.

Login Page

- Login page visual styling has been updated.
- Team/application branding is visible.
- Styling is consistent with the rest of the application.
- Existing login functionality remains unchanged.
- Existing authentication logic is not modified.
- Existing session behaviour remains unchanged.
- Successful login continues to navigate to the existing dashboard.
- Existing authentication error handling continues to work.

7. Out of Scope

The following are out of scope for this task:

- Changes to authentication logic
- Changes to session management
- Changes to user registration
- Changes to password recovery
- Changes to database authentication
- Changes to existing dashboard functionality
- Changes to agreed team roles
- Development of new cybersecurity/AI functionality
- Implementation of a Team management/admin system
